

Yan Bogdanov

UX/UI Designer

Work Experience

maryco
august 2024 — present

UX/UI Designer

I joined the studio as a middle UI/UX designer and grew into a lead designer over time. Today I not only work on design myself but also shape the design approach across the whole team. My work covers client websites and landing pages — from developing visual solutions and running UI/UX audits to designing interfaces of varying complexity, creating guidelines, and preparing presentations.

I stay actively involved in design support after a project launches, and often write code directly in Tilda to bridge the visual concept with its real implementation.

Freelance
2023 — present

UX/UI Designer

For the past several years I've worked as a freelance UX/UI designer, helping companies and individual clients launch and grow digital products. My approach to freelancing isn't about literally executing a brief — it's about carefully thinking through the product itself: asking the right questions from the start, shaping the concept, and making sure the design actually solves the problem behind the request.

This approach has taken shape across many formats: landing pages for product and service launches, responsive interface design, visual concepts and prototypes, presentations of design decisions, infographics, work on the Tilda platform, as well as coding in React/HTML/CSS, direct client communication, and participation in briefings

Freelancing has developed my flexibility and sense of responsibility, and taught me to see a project as a whole — not just the screens, but the logic behind them.

Education

Higher education
2025 — present

University
Novosibirsk State Pedagogical University (NSPU)

Major
Computer Science and Information & Communication Technologies

About Me

personal information

A UI/UX designer who treats interfaces as systems — thinking through structure, logic, and visual language to keep the product intuitive and cohesive. I gravitate toward clean, minimalist design, but I value expressive details where they genuinely improve the experience. Right now my focus is design systems: tokens, components, states, and rules that make design consistent and scalable. Frontend development experience helps me think not just about how an interface looks, but how it actually works in real conditions.

hard skills

Figma — from UX to interfaces and design systems. Tilda, Webflow, Framer — customization and code. HTML, CSS, basic React. I build Figma plugins and small tools to speed up workflows. Confident with layout structure, spacing systems, and responsive design. Attention to detail — spacing, rhythm, and the small visual decisions that shape the feel of a product.

soft skills

Lead designer at a studio — I manage project delivery, build processes, and help shape the internal UI/UX methodology. Communication with developers, managers, and clients is direct and collaborative. I approach tasks structurally: planning ahead, asking the right questions upfront, and reducing uncertainty before work starts. I treat feedback as a tool — translating it into concrete changes.
